

Olecranon Fracture Classification Table

(Mayo Classification)

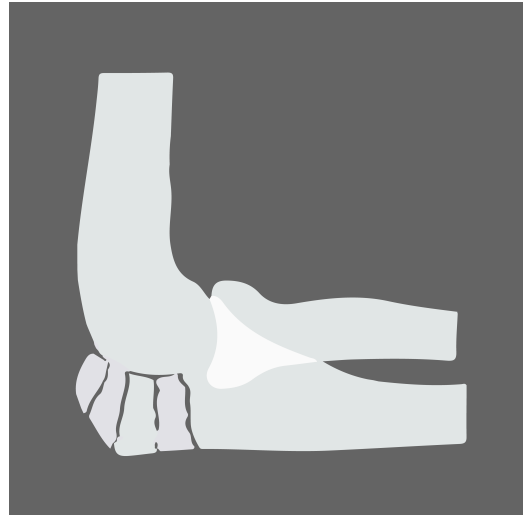

This Olecranon Fracture Classification Table is based on the Mayo Classification system, which categorizes olecranon fractures by the level of displacement and joint involvement. Each type of fracture is associated with specific treatment protocols aimed at optimizing recovery outcomes.

Undisplaced fractures

Type IA:

Undisplaced, non-comminuted

Type IB:

Undisplaced, comminuted

Displaced fractures with a stable ulnohumeral joint

Type IIA:

Displaced, non-comminuted

Type IIB:

Displaced, comminuted

Displaced fractures with an unstable ulnohumeral joint

Type IIIA:
Unstable, non-comminuted

Type IIIB:
Unstable, comminuted
