Medical condition/DSM diagnosis
Medical condition/DSM diagnosis:
Problem identification
Describe the specific issues or concerns identified through assessment and diagnosis. Avoid general diagnoses and focus on concrete problems.
Goals
Define long-term, general outcomes that are the opposite of the identified problem. Goals should be aspirational and represent the desired end state.

Objectives
Break down the goal into short-term, actionable steps. Objectives should specify who will do what, by when, and how often.
Interventions
List specific strategies and actions to achieve the objectives. Interventions should align with the theoretical approach and address the client's unique needs.
Evaluation and review
Instructions: Describe how progress will be measured and how frequently the treatment plan will be reviewed and updated.
