13. I've been interested in new things.					
14. I've been feeling cheerful.					
Total score:	/ 70				

Scoring the WEMWBS

Total the scores

Add the scores for all 14 statements. Each statement is rated from 1 (None of the time) to 5 (All of the time), providing a total score range of 14–70.

What scores represent

Aside from being used in personal analysis, scores as a group are gathered to determine the average and the norms to compare personal scores to their demographic.

- Higher scores indicate greater mental well-being and positive functioning.
- Lower scores suggest challenges in mental well-being, potentially requiring further assessment or intervention.

Using scores in practice

Practitioners can use the results to monitor changes over time, evaluate intervention outcomes, and identify areas for therapeutic focus.
